

DR -S series

Electric Submersible Dredging Pump Electric Submersible Slurry & Sand Pump

Electric Submersible Dredging Pump (22 to 375 kW) have been designed for stirring up and mixing into suspension abrasive component such as sand, gravel, stones and similar debris and then transerring it over considerable distances. They are ideal for a wide range of dredging, mineral extract operations.

VERSA® PUMP

DR -S series

Electric Submersible Dredging Pump Electric Submersible Slurry & Sand Pump

**DR-S series pump
are particularly effective in the
following sectors :**

- **Public works**
- **Offshore**
- **Sand extraction**
- **Mining**
- **Industrial waste**
- **All types of effluent with solids in suspension**
- **Dredging of harbours**
- **Clean-up of rivers, lakes and lagoons**
- **Underwater work**
- **Ecological recovery**
- **Inert wash studdes**
- **Marble dust**
- **Heavy soil**
- **Sewage**
- **General sludge disposal**

Performance Range :

- **Flow Rate : up to 100 M³ / Minute.**
- **T. Head : up to 40 Metres**
